

Refreshing Data in Data Point Viewer

1. If you are creating a *new* worksheet, always make sure to check the refresh button. The default setting does not have this button checked, you must check it every time! This will allow your data to automatically refresh every time you open the file.

2. When opening a *saved* worksheet in Data Point Viewer, the "Dataset Refresh" window should ALWAYS come up. DO NOT CANCEL THIS WINDOW! Canceling the refresh will result in data not being updated.

3. If for some reason you open a saved workbook and the “Dataset Refresh” window does not pop up, click on the wheel icon under “Datasets” and select “Refresh Data Now”. If you have two datasets listed in your worksheet, you must refresh both!
